

HARD LANDING FEARS AND RISING RATES HIT STOCKS AND BONDS

LPL RESEARCH'S MONTHLY MARKET OUTLOOK

Key changes from September report:

- Downgrading financials view to negative from neutral.
- Upgraded our view of duration to neutral
- Lowered S&P 500 Year-End Fair Value Target to 4,000-4,100 from 4,300-4,400.

Investor sentiment was hit from multiple directions in September, but fears that a more hawkish Federal Reserve (Fed) would drive a hard landing for the U.S. economy following disappointing August inflation data was the top cause of the market's struggles. Surging interest rates, a likely recession in Europe, and concerns about a potential U.K. currency crisis also contributed to a tough month for stocks. The S&P 500 Index tumbled 9.3% in September, temporarily breaking below the June 2022 closing low. The index has lost 23.9% year to date through September 30.

Core bonds, as measured by the Bloomberg Aggregate Bond index, lost 4.3% during the month as Treasury yields were steadily higher in August. The belief by the Fed that short-term interest rates need to continue to go higher and stay there pushed Treasury yields higher during the month.

The Strategic and Tactical Asset Allocation Committee (STAAC) upgraded its view of duration to neutral. Now that interest rates have moved higher, we believe opportunities in fixed income have improved and are looking to add back to certain areas within fixed income that may benefit.

The STAAC Committee's revised S&P 500 year-end fair value target of 4,000-4,100 is based on a price-to-earnings ratio of 17.5 times the Committee's 2023 S&P 500 earnings per share forecast of \$230.

INVESTMENT TAKEAWAYS:

- The STAAC Committee maintains its overweight equities recommendation relative to bonds.
- Inflation has been slower to come down than the Committee anticipated, but seasonal tailwinds, historically strong rebounds from shallow bear markets and midterm election year lows, and the likelihood that the end of the Fed rate hike cycle is only three to six months away are supportive.
- We suggest a slight tilt toward the value style in the short term, though we would expect an improved macroeconomic environment to soon create a more favorable environment for the growth style.
- We continue to recommend a slight underweight allocation to fixed income as higher rates may put additional pressure on bond returns.
- The Fed's determination to keep rates higher for longer has caused U.S. Treasury yields to move significantly higher. Our revised year-end target for the 10-year Treasury yield is 3.25% to 3.75%.
- Shorter maturity corporate credit, mortgage-backed securities, and high yield bonds (for income-oriented investors) are starting to look more attractive.

2022 MARKET FORECASTS

Reducing Year-End S&P 500 Fair Value Target Range as Higher Interest Rates Pressure Valuations

	Previous	Current
10-Year U.S. Treasury Yield	2.75%-3.25%*	3.25% to 3.75%*
S&P 500 Index Earnings per Share	\$225	\$220
S&P 500 Index Fair Value	4,300-4,400	4,000-4,100**

Source: LPL Research, FactSet, Bloomberg

All indexes are unmanaged and cannot be invested into directly. The economic forecasts may not develop as predicted.

*Our year-end 2022 forecast for the U.S. 10-year Treasury yield is 3.25% to 3.75%. The forecast reflects above-trend inflation, reduced Fed policy support, an aging demographic in need of income, higher global debt levels, and anticipated rebalancing into fixed income from equities.

**Our year-end 2022 fair-value target range for the S&P 500 of 4,000-4,100 is based on a price-to-earnings ratio (PE) of 17.5 and our S&P 500 earnings per share (EPS) forecast of \$230 in 2023.

2022 AND 2023 ECONOMIC FORECASTS

Downshift in Global Growth

GDP Growth (Y/Y%)	2022	2023
United States	0.9% to 1.5%	0.6% to 1.2%
Eurozone	1.3% to 1.9%	0.5% to 1.1%
Advanced Economies	1.7% to 2.3%	0.7% to 1.3%
Emerging Markets	2.8% to 3.4%	3.2% to 3.8%
Global	2.5% to 3.1%	2.3% to 2.9%

For investors who have their own benchmarks, we would recommend emphasizing underweights or overweights relative to the individual benchmark at the most similar overall risk level.

Equity benchmark style box allocations are based on lookthrough analysis of the domestic equity indexes used in our benchmark. While the indexes stay constant, style box allocations may drift over time.

Bond benchmark sector allocations are based on a look-through analysis of the major sector components of the Bloomberg Barclays US Aggregate Bond Index.

Treasuries include other government related debt. MBS includes other securitized debt.

Abbreviations: TAA - tactical asset allocation; MBS - mortgage-backed securities; IG corporates - investment-grade corporates; TIPS - Treasury inflation-protected securities.

Style box allocations only include domestic allocations.

EQUITY ASSET CLASSES

Maintaining U.S. Focus

Inflation has been slow to come down, but seasonal tailwinds, historically strong rebounds from shallow bear markets and midterm election year lows, and the likelihood that the end of the Fed rate hike cycle is only three to six months away are supportive of equities. Key risks include a potentially overly aggressive Fed that drives the U.S. economy into recession, a possible broader military conflict in Europe, and U.S-China tensions.

For now, the Committee believes a slight tilt toward the value style is prudent, although renewed confidence in economic and earnings growth and stable interest rates may soon set the stage for a growth turnaround. Small caps may benefit from valuation support and their U.S. focus as recession fears potentially abate. The worsening energy crisis in Europe supports the Committee’s preference for U.S. equities over developed international, while the STAAC’s EM downgrade last month reflected earnings weakness, unrelenting US dollar strength, and weak technical analysis trends.

	Sector	Overall View	Relative Trend	Rationale
Market Capitalization	Large Caps			Large caps, which generally perform better during periods of economic uncertainty, are better positioned to manage global supply chain disruptions than small caps but are more exposed to weakness in Europe and are more expensive.
	Mid Caps			If markets regain confidence in the economic outlook, mid caps may benefit from their economic sensitivity. Mid cap stock valuations are near 20-year lows compared to large caps. Merger and acquisition environment has slowed as monetary conditions have tightened, removing a potential positive catalyst.
	Small Caps			Small cap valuations have become attractive and smaller companies are relatively more insulated from economic risks in Europe. Once recession fears calm, small caps may be poised for a run of outperformance. We would favor higher quality small caps such as those that make up the S&P 600 Index over the Russell 2000, which has a higher allocation to unprofitable companies.
Style	Growth			This fall we would anticipate the growth style benefiting from stable economic growth, stable interest rates, and superior earnings power. However, growth stocks are still relatively expensive and high inflation and rising interest rates favor value
	Value			Tailwinds from the reopening and rising commodities prices have waned. If recession fears ebb, defensive value sectors such as consumer staples and utilities may garner less support. Still, growth stocks face more interest rate risk and value stocks remain attractively valued relative to growth, so for now we remain slightly biased toward the value side.
Region	United States			The energy crisis in Europe has strengthened our conviction in favoring U.S. equities over their developed international counterparts and delays the synchronized global expansion. The U.S. economy is better positioned than Europe to withstand higher energy costs, particularly Germany which is very reliant on Russian energy.
	Developed International			Our March 2022 downgrade of international equities reflected Europe’s heavy reliance on Russian energy. Germany appears to be on the cusp of a recession. Currency headwinds are intensifying. May require a synchronized global expansion and weaker dollar to outperform.
	Emerging Markets			Earnings weakness, geopolitical tensions, persistent COVID-19 lockdowns in China, weak technical analysis trends, and a surging U.S. dollar more than offset China’s stimulus and easing regulatory pressures and attractive valuations.

Relative trend is an assessment of the intermediate term price trend and performance between various asset classes and sectors. For regions and styles the relative trends are compared to each other.

EQUITY SECTORS

Keeping an Eye On Interest Rates For Evidence of an Opportunity In Technology

The STAAC continues to recommend a slight tilt toward defensive sectors amid elevated economic uncertainty and market volatility. The long-term energy uptrend remains intact and stocks may be pricing in an overly pessimistic supply-demand picture. We maintain our positive healthcare view despite the effects of drug price reform in the Inflation Reduction Act, which we believe are more than fully priced in. Real estate remains a favored sector but may require interest rates to reverse lower to outperform. The macroeconomic outlook is becoming more favorable for growth sectors, suggesting technology may be ripe for a potential upgrade in the very short term.

	Sector	Overall View	Relative Trend	S&P Wgt	Rationale
Cyclical	Materials			2.5	Infrastructure spending and inflation are supportive, while valuations are still reasonable. But technicals have weakened, China's economy is stalling, surging natural gas prices curb chemical company profits, and the U.S. dollar is surging.
	Energy			4.4	Remains in a long-term uptrend despite consolidating oil prices. Global supply likely to remain tight for some time. Increase in production to replace Russian oil in global marketplace will take time, though China's reopening has stalled.
	Industrials			7.8	Solid capital expenditures growth, more infrastructure spending on the way, and technical analysis trends have turned positive. However, lackluster global economic growth and ongoing supply chain disruptions temper the outlook some.
	Communication Services			8.1	A toughening regulatory environment for this digital media-heavy sector, an expected earnings decline in 2022, weak earnings revisions, and negative technical analysis trends are driving our negative view despite reasonable valuations.
	Consumer Discretionary			11.9	Inflation is eroding purchasing power, the sector is historically not a strong mid-to-late cycle performer, retailers' profit margins are challenged, and valuations are elevated. Sector performance getting a boost from falling energy prices, which may not continue.
	Technology			26.7	Sustained interest rate stability may be required for better growth style performance. Earnings are hanging in ok and sector valuations are broadly reasonable. A sector to watch for a potential upgrade.
	Financials			10.9	Lackluster economic growth, yield curve inversions, weakening European economies, and bearish technical analysis signals drove this month's downgrade. Valuations remain attractive.
Defensive	Utilities			3.2	Technical analysis drove the April upgrade. Green-energy spending may help. Recession may be needed to sustain outperformance and valuations are elevated but technical momentum is strong. Sector holding up well despite drag from surging interest rates.
	Healthcare			15.0	Maturing economic cycle, demographics, and valuations remain supportive, but drug price reform has been passed and introduces some near-term headline risk and modest long-term earnings risk.
	Consumer Staples			6.9	Slow-growth staple companies are getting squeezed by higher costs and valuations are elevated. Even though interest rate risk may be lower, this defensive sector may lag in a potential Q4 stock market rally.
	Real Estate			2.8	Attractive yields, ability to manage inflation relatively well, and exposure to secular technology tailwinds are all positives. Valuations are still fair. Sector likely requires a reversal lower in interest rates to outperform.

Because of its narrow focus, specialty sector investing, such as healthcare, financials, or energy, will be subject to greater volatility than investing more broadly across many sectors and companies. Relative trend is an assessment of the intermediate term price trend and performance between various asset classes and sectors.

Relative trend is an assessment of the intermediate term price trend and performance between various asset classes and sectors. For sectors each sector's relative trend is versus the S&P 500.

FIXED INCOME

Taking Advantage of Higher Yields and Improved Diversification Benefits.

The LPL Research Strategic and Tactical Asset Allocation Committee is increasing its recommended interest rate exposure in its tactical allocation from underweight to neutral. Now that interest rates have moved substantially higher, we believe opportunities in fixed income have improved and are looking to add back to certain areas within fixed income that may benefit. From a sector perspective, we continue to see increasing investment opportunities in shorter maturity investment grade corporates and Agency mortgage-backed securities (MBS). Also, higher yields (and still low default expectations) for lower rated corporate credit markets make this area interesting as well.

We favor **municipal bonds** as a high-quality option for taxable accounts and given the recent rate-driven selloff, valuations relative to Treasuries have improved. Additionally, for appropriate investors, we believe **high yield municipal bonds** offer an attractive tax-equivalent yield however we would expect additional volatility as economic growth concerns increase. Fundamentals in both markets remain solid though.

		Low	Medium	High	Rationale
Positioning	Credit Quality				Yields in many credit markets exceed their longer-term averages so prospects for future returns may have improved. We think the economic outlook remains supportive as well.
	Duration				With higher yields and, we think, the improved diversification benefits of bonds, we've upgraded our view of duration to "neutral" relative to our index.
		Neg.	Neutral	Pos.	Rationale
Sectors	U.S. Treasuries				Yields have traded meaningfully higher recently as the market has repriced the number of expected Fed rate hikes. Volatility is likely to remain elevated though as the Fed continues to reduce Treasury reinvestments. Yield spreads to international sovereigns remain attractive but have narrowed recently. Inflation breakeven rates leave TIPS fully valued, particularly for longer-maturity securities.
	MBS				Despite what looks like a downgrade, we remain constructive on Agency MBS. With yields and spreads at multi-year highs, we think MBS remain an attractive investment opportunity. The Fed has stopped new MBS purchases and balance sheet runoff is a potential risk though.
	Investment-Grade Corporates				The recent sell-off in corporate credit has impacted shorter maturity corporates disproportionately, so we think there is currently an opportunity to add to this area of the market without taking on elevated levels of interest rate or credit risk. Fundamentals remain solid.
	Preferred Stocks				Higher credit quality among the riskier fixed income options. Bank fundamentals sound overall. Can be rate sensitive but may be able to tolerate gradual increases. Valuations have improved recently. European banks likely to stay under pressure as ECB hikes rates.
	High-Yield Corporates				With total yields in high yield bonds above historical averages, though with arguably a higher-quality index disposition, the value proposition for high yield bonds has improved. Additionally, credit fundamentals remain sound. Volatility is likely to remain elevated though.
	Bank Loans				Economic environment is supportive and better sector mix than high yield. Given the variable rate debt though, higher interest rates may make repayment more challenging for some issuers. Fewer investor protections and illiquidity of individual loans remain concerns. While we're still constructive on bank loans, the relative value proposition favors high yield bonds, in our view.
	Foreign Bonds				Valuations have improved but potential currency volatility still remains a challenge.
	EM Debt				Central banks are tightening aggressively as inflationary pressures remain stubbornly high and a strong dollar provides a headwind to prices. Valuations are relatively attractive but idiosyncratic risks remain. Liquidity can be an added risk during periods of stress.

Yield spread is the difference between yields on differing debt instruments, calculated by deducting the yield of one instrument from another. The higher the yield spread, the greater the difference between the yields offered by each instrument. The spread can be measured between debt instruments of differing maturities, credit ratings, and risk. **Bank loans** are loans issued by below investment-grade companies for short-term funding purposes with higher yield than short-term debt and involve risk. For the purposes of this publication, **intermediate-term bonds** have maturities between 3 and 10 years, and short-term bonds are those with maturities of less than 3 years.

All bonds are subject to market and interest rate risk if sold prior to maturity. Bond values will decline as interest rates rise and are subject to availability and change in price. **Corporate bonds** are considered higher risk than government bonds but normally offer a higher yield and are subject to market, interest rate, and credit risk, as well as additional risks based on the quality of issuer, coupon rate price, yield, maturity, and redemption features. Investing in **foreign and emerging market debt (EMD)** securities involves special additional risks. These risks include, but are not limited to, currency risk, geopolitical and regulatory risk, and risk associated with varying settlement standards. **High-yield/junk bonds** are not investment-grade securities, involve substantial risks, and generally should be part of the diversified portfolio of sophisticated investors. **Municipal bonds** are subject to availability, price, and market and interest rate risk if sold prior to maturity. Bond values will decline as interest rates rise. Interest income may be subject to the alternative minimum tax. Federally tax-free but other state and local taxes may apply. **Mortgage-backed securities (MBS)** are subject to credit, default, prepayment risk that acts much like call risk when you get your principal back sooner than the stated maturity, extension risk, the opposite of prepayment risk, market and interest rate risk.

COMMODITIES

Outlook for Most Key Commodities Continues to Dim

Most key commodities continued to pull back in September, leaving little to support the Bloomberg Commodity Index, which fell for the month. Broadly, the weakness was driven by continued COVID-19-related lockdowns in China, while ongoing fears about recession in the United States also caused markets to keep demand expectations modest. The strong U.S. dollar has added another headwind for commodities priced in dollars globally. From a technical perspective, we are no longer seeing an upward trend despite trailing year gains, with the broad index basically flat since mid-March.

Our energy commodities view is neutral but with a negative bias. The chart looks slightly more positive than industrial metals to us currently, especially on a long-term basis. While WTI crude oil is well off its March highs following the Russian invasion of Ukraine, it remains in a long-term uptrend and supplies are likely to remain tight in the near term, although falling demand may be having a larger impact. Aggressive Fed policy will limit the growth of the U.S. economy in the second half, and China's delayed reopening continues to keep a cap on oil prices. Natural gas prices have become extremely volatile as economic uncertainty competes with restricted supplies from Russia into Europe. Neither oil nor gas is an attractive trade right now on the long or short side given high price volatility.

Lockdowns in China continue to pressure copper prices, which experienced a major technical breakdown in June and early July. Copper and other industrial metals look broadly to have topped as the global economy braces for a potential recession in Europe and takes down expectations for economic growth in China and the U.S. Our industrial metals view is negative.

While precious metals look better to us than industrial, our precious metals view is also negative. Gold has traded sideways to lower over the past couple of years, making it difficult to have any conviction in a call in either direction from a technical perspective.

Meanwhile, interest rates are rising, the U.S. dollar continues its steady march higher, and inflation has started to come down, which are all working against gold and silver prices. Return prospects for equities look more favorable to us over the next six to 12 months.

ALTERNATIVE INVESTMENTS

Downside Protection Continues

Alternative investment strategies provided strong downside protection during a volatile month for equity and credit markets. Our preferred alternatives implementations, which include event driven, market neutral, and low-beta single and multi-manager strategies, continue to outperform traditional asset classes. Looking forward, we continue to advocate for diversifying alternative investment exposure across several low-beta allocations as an appropriate implementation method. While all of these strategies have their own characteristics, at their core they exhibit limited equity market and interest rate sensitivity. We believe these allocations may help preserve portfolios in the current environment and act as a source of ballast during potential periods of high volatility.

These characteristics have been on display this year and reinforced the benefit of these strategies within the context of a broader portfolio. In regards to the event-driven industry, our three main tailwinds remain in place. These include high corporate cash balances, low borrowing rates, and the private equity industry's dry powder.

Further diversification across market neutral and multi-strategy strategies may provide additional sources of uncorrelated returns and the potential to mitigate traditional equity and bond market risks. While currently not one of our preferred implementations, managed futures investors should be wary of further strength in equity and bond markets, as most strategies in the space have been consistently short since the beginning of the year.

IMPORTANT DISCLOSURES

This material has been prepared for informational purposes only, and is not intended as specific advice or recommendations for any individual. There is no assurance that the views or strategies discussed are suitable for all investors and they do not take into account the particular needs, investment objectives, tax and financial condition of any specific person. To determine which investment(s) may be appropriate for you, please consult your financial professional prior to investing. Any economic forecasts set forth may not develop as predicted and are subject to change.

Stock investing involves risk including loss of principal. Because of their narrow focus, sector investing will be subject to greater volatility than investing more broadly across many sectors and companies. Value investments can perform differently from the market as a whole and can remain undervalued by the market for long periods of time. The prices of small and mid-cap stocks are generally more volatile than large cap stocks. Bonds are subject to market and interest rate risk if sold prior to maturity.

Bond values will decline as interest rates rise and bonds are subject to availability and change in price. Corporate bonds are considered higher risk than government bonds. Municipal bonds are subject to availability and change in price. Interest income may be subject to the alternative minimum tax. Municipal bonds are federally tax-free but other state and local taxes may apply. If sold prior to maturity, capital gains tax could apply. U.S. Treasuries may be considered “safe haven” investments but do carry some degree of risk including interest rate, credit, and market risk. Bond yields are subject to change. Certain call or special redemption features may exist which could impact yield. Mortgage-backed securities are subject to credit, default, prepayment, extension, market and interest rate risk.

Credit Quality is one of the principal criteria for judging the investment quality of a bond or bond mutual fund. Credit ratings are published rankings based on detailed financial analyses by a credit bureau specifically as it relates to the bond issue’s ability to meet debt obligations. The highest rating is AAA, and the lowest is D. Securities with credit ratings of BBB and above are considered investment grade. Duration is a measure of the sensitivity of the price (the value of principal) of a fixed-income investment to a change in interest rates. It is expressed as a number of years.

Alternative investments may not be suitable for all investors and should be considered as an investment for the risk capital portion of the investor’s portfolio. The strategies employed in the management of alternative investments may accelerate the velocity of potential losses.

Event driven strategies, such as merger arbitrage, consist of buying shares of the target company in a proposed merger and fully or partially hedging the exposure to the acquirer by shorting the stock of the acquiring company or other means. This strategy involves significant risk as events may not occur as planned and disruptions to a planned merger may result in significant loss to a hedged position.

Commodity-linked investments may be more volatile and less liquid than the underlying instruments or measures, and their value may be affected by the performance of the overall commodities baskets as well as weather, geopolitical events, and regulatory developments. The fast price swings in commodities and currencies will result in significant volatility in an investor’s holdings.

Investing in foreign and emerging markets securities involves special additional risks. These risks include, but are not limited to, currency risk, geopolitical risk, and risk associated with varying accounting standards. Investing in emerging markets may accentuate these risks. All information is believed to be from reliable sources; however, LPL Financial makes no representation as to its completeness or accuracy.

Earnings per share (EPS) is the portion of a company’s profit allocated to each outstanding share of common stock. EPS serves as an indicator of a company’s profitability. Earnings per share is generally considered to be the single most important variable in determining a share’s price. It is also a major component used to calculate the price-to-earnings valuation ratio.

Gross Domestic Product (GDP) is the monetary value of all the finished goods and services produced within a country’s borders in a specific time period, though GDP is usually calculated on an annual basis. It includes all of private and public consumption, government outlays, investments and exports less imports that occur within a defined territory.

All index data from FactSet.

For a list of descriptions of the indexes referenced in this publication, please visit our website at lplresearch.com/definitions.

Managed futures are speculative, use significant leverage, may carry substantial charges, and should only be considered suitable for the risk capital portion of an investor’s portfolio.

Securities and advisory services offered through LPL Financial (LPL), a registered investment advisor and broker/dealer (member FINRA/SIPC). Insurance products are offered through LPL or its licensed affiliates. To the extent you are receiving investment advice from a separately registered independent investment advisor that is not an LPL Financial affiliate, please note LPL Financial makes no representation with respect to such entity.

Not Insured by FDIC/NCUA or Any Other Government Agency	Not Bank/Credit Union Guaranteed	Not Bank/Credit Union Deposits or Obligations	May Lose Value
